# UML System Design

# Workload Split:

## ➤ App (Loai, Abdullah, Hossam)

The Main app that handles menu display and input.

## ➤ Machine (Loai, Abdullah, Hossam)

Extracts instructions from file and stores it in memory and calls out the CPU to handle programs.

## ➤ Memory (Abdullah)

The Main memory where the programs are stored.

## ➤ Register (Abdullah)

The random-access memory where programs processes are stored in.

## ➤ CPU (Loai)

The Processing Unit which calls the needed resources and processes to execute the command.

## ➤ CU (Abdullah)

The Computation unit which handles the processes such as storing in the registers and memory and skipping instructions.

## ➤ ALU (Hossam)

The Arithmetic unit which handles the mathematical operations.

## ➤ Headers.h (Abdullah)

All C++ necessary libraries iostream, string, ...etc.

## ➤ Methods (Loai, Abdullah, Hossam)

Some commonly used functions in the machine system.

## ➤ Options (Loai)

Allows the user to use keyboard keys to navigate through the menu.

.vscode	Updated menu display and added options to select from	last week
T1	reorganized A1 repo	2 weeks ago
T2	reorganized A1 repo	2 weeks ago
T3/idea	bone us added (loa zpt el uml w make sure ana zabt el cpu)	10 hours ago
T4	bom	10 hours ago
section	Added CPU skipping invalid lines	2 weeks ago
README.txt	Final!! 🐱🐱🐱🐱🐱	4 days ago
asciiArt.txt	Added asciiArt to menu	last week
testPy.py	added base text file with instructions	2 weeks ago

README

To run the program properly and view the UI please do the following

1-Preferably use Visual Studio Code (Clion may cause issues with the UI)

2-Open a new Terminal and use GitBash instead of Powershell

3-Enter the following command to automatically compile and run the program

the command-> ./run

Note:

make sure the bash terminal is in the right directory where all the files are if Not

1- enter the command-> cd

2- enter the command-> cd fullPathToDirectory

3- enter the command-> ./run

No description, website, or topics provided.
